

Shopping Sales Analysis – Summary of Insights

Project Overview

This analysis explores customer purchasing behavior, sales performance, product performance, and customer loyalty using SQL. The goal is to identify key business insights that can help improve sales strategies and customer engagement.

1. Sales Performance

- The business generated a **total revenue of 532866**.
- The **average purchase amount** per customer was **59.87**.
- **Clothing** generated the highest revenue, followed by **Accessories**, **Footwear**, and **Outerwear**.
- The top revenue-generating products were **Blouse**, **Shirt**, **Jewelry**, **T-shirt**, and **Dress**.

Insight: Clothing products are the main revenue drivers and should remain a key focus for inventory and promotions.

2. Customer Analysis

- **Young Adults** contributed the highest revenue, followed by **Middle-aged**, **Adults**, and **Seniors**.
- Male customers generated higher total revenue because there were more male customers in the dataset.
- Female customers had a slightly higher average purchase amount per customer.
- The top five revenue-generating locations were **Kansas**, **Rhode Island**, **Hawaii**, **Florida**, and **Wyoming**.

Insight: Young Adults are the most valuable customer segment, while female customers tend to spend slightly more per purchase.

3. Subscription & Customer Loyalty

- Non-subscribed customers generated much higher total revenue than subscribed customers.
- However, the average purchase amount for both groups was almost the same.
- Most customers were classified as **Loyal**, while a smaller group was classified as **Returning**.
- Loyal customers made the majority of purchases and generated the highest revenue.
- Most repeat buyers were **not subscribed**, indicating an opportunity to increase subscription adoption among existing customers.

Insight: Loyal customers are the backbone of the business, but many of them are still not subscribed.

4. Discount Analysis

- About **43%** of purchases used a discount.
- Customers using discounts spent **slightly less on average** than customers without discounts.
- Purchases without discounts generated higher overall revenue.

Insight: Discounts increase purchase activity but do not necessarily lead to higher spending per customer.

5. Product Performance

- The highest-rated products were **Gloves, Skirt, Sandals, Hat, and Socks**.
- The top-performing products by category were:
 - **Accessories:** Jewelry, Hat, Belt
 - **Clothing:** Blouse, Shirt, T-shirt
 - **Footwear:** Sandals, Boots, Shoes
 - **Outerwear:** Jacket, Coat

Insight: These products receive strong customer feedback and contribute significantly to sales.

6. Shipping Analysis

- **Standard Shipping** received a slightly higher average review rating than **Express Shipping**.

Insight: Faster shipping does not necessarily result in better customer ratings.

7. Revenue Contribution by Category

Category	Revenue Contribution
Clothing	44.89%
Accessories	31.78%
Footwear	15.27%
Outerwear	8.06%

Insight: Nearly half of the company's revenue comes from the Clothing category, making it the strongest business segment.

Overall Conclusion

The analysis shows that **Clothing** is the most important product category and **Young Adults** are the highest-value customer group. **Loyal customers** contribute the majority of revenue, but many are not subscribed, creating an opportunity for customer retention programs. While discounts help increase purchases, they do not significantly increase average spending. Product ratings remain consistently high, with Standard Shipping receiving slightly better customer feedback than Express Shipping.
